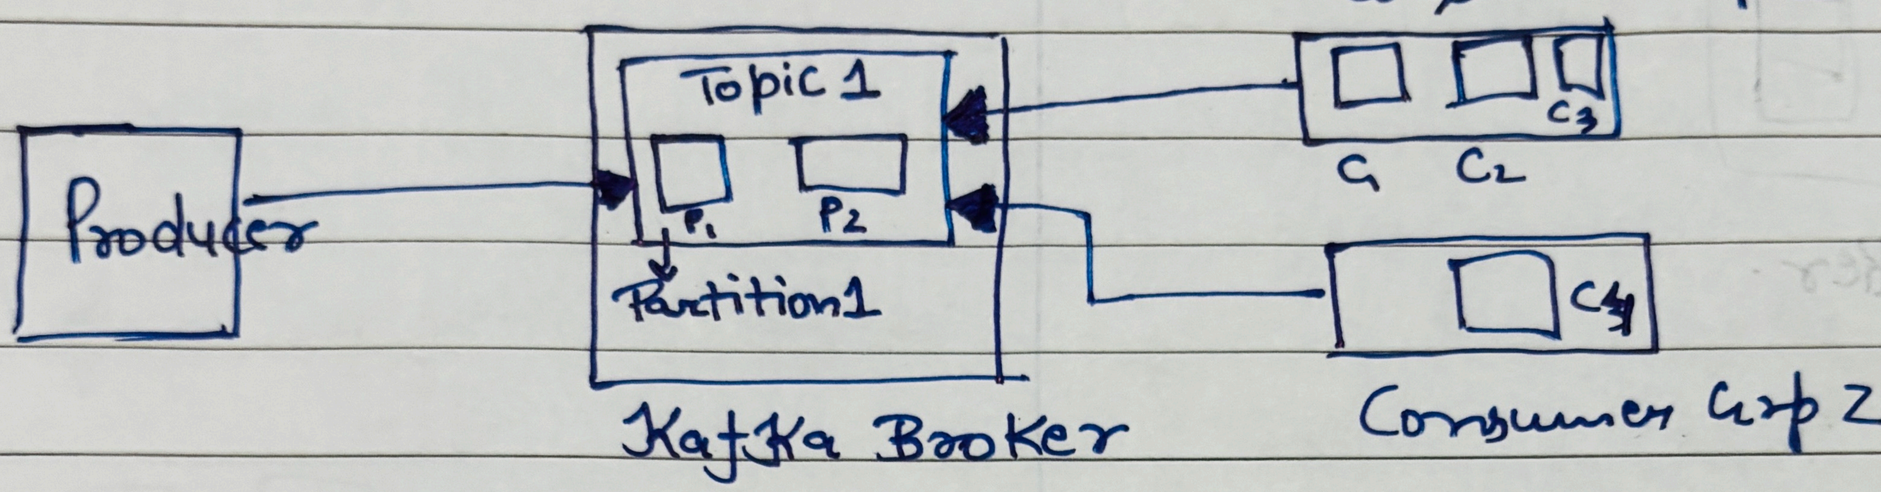
Kafka for Dummies

→ Kafka is a distributed streaming platform, acting as a messaging System.
→ Follows pub Sub - System.



=> here Both Consumer grops listents to topic 1.
=> Autobalancing takes place within a given consumer group. i.e $P_1 \Rightarrow C_1$, $P_2 \Rightarrow C_2$, $C_3 \Rightarrow$ idle, also $P_1 \Rightarrow C_4$, $P_2 \Rightarrow C_4$.
=> This is a Whole PubSub System.
=> There Can be multiple Producers, Producing to multiple Topics.
=> Multiple producers can produce to same topic.
=> with in a given Consumer group, one partition can only be Consumed by one group only.

=> we can also leverage the Queue System of Kafka by the below.

- Kafka as a Queue => (Single group, multiple Consumer)
- Kafka as a PubSub => (Single group, each fully Consuming)
